

pH Sensor for Hydrolab multparameter sondes

The Hydrolab pH sensor uses a glass bulb measuring electrode and refillable reference electrode.

There are two versions available:

- pH with standard reference uses a separate measuring electrode and reference electrode, each in their own sonde port
- pH with integrated reference combines the measuring electrode and reference into one sonde port

pH Sensor	
Range	0 ... 14 pH units
Accuracy	±0.2 pH units* <small>*Within the environmental pH range of pH 4 to pH 10</small>
Resolution	0.01 pH units
