

### pH Sensor for Hydrolab multparameter sondes

The Hydrolab pH sensor uses a glass bulb measuring electrode and refillable reference electrode.

There are two versions available:

- pH with standard reference uses a separate measuring electrode and reference electrode, each in their own sonde port
- pH with integrated reference combines the measuring electrode and reference into one sonde port

| pH Sensor  |   |
|------------|---|
| Range      | 0 ... 14 pH units                                   |
| Accuracy   | ±0.2 pH units*                                      |
|            | *Within the environmental pH range of pH 4 to pH 10 |
| Resolution | 0.01 pH units                                       |
