

## Weather sensor for humidity and temperature

- Parameters measured Air temperature and relative air humidity (measured), absolute air humidity, dewpoint and mixing ratio (calculated)
- Measurement range PT1000, capacitive
- **Product Highlights** Low power draw, long-term stable, suitable for extreme temperatures, protective housing included
- Interface SDI-12 V1.3

The compact, long-term stability weather sensor OTT TRH is responsible for the measurement of relative humidity and temperature. In addition it can calculate the values for absolute humidity, dew point and mixing ratio and output these via the SDI-12 interface. A protective cap prevents dust and dirt from entering the sensor system. The included protective housing provides weather and radiation protection.

Sensor TR2O	
Sensor output	
measured	Temperature in °C or °F, relative humidity in %
calculated	Absolute humidity in g/m <sup>3</sup> , dew point in °C or °F, mixing ratio in
	g/kg
