

OTT Maximum Level Gauge to indicate max water level after flood or tide

- **Application**  
Surface water
- **Measurement technology**  
Visual, color tape
- **Parameters measured**  
Water level
- **Product Highlights**  
Records high tide or surface water level
- **Measurement range**  
1 m

The OTT Maximum Level Gauge is a cost-effective measuring device that indicates the maximum water level by tidal waves or other level fluctuations over a color marking. It is based on the simple principle of color marking. The threshold level is used for preservation of evidence and provides accurate data for later post-processing of flood events.
